Clackamas County SWCD 2013-2014 Annual Report

Hitting our Stride and Moving Forward

We are pleased to report another great year of conserving natural resources in Clackamas County. Our partnerships became stronger and our numerous projects were successful. We assisted more customers with conservation implementation loans than ever before.

In 2014, after several years of investing time and energy in improving irrigation systems, we saw a surge in irrigation system improvement projects. Several irrigators used loans from the District to change to systems that use less water and energy. The first five projects reduced water usage on 150 acres, and growers report healthier plants on those converted acres, even though they are using less water.

As I write this message, I'm excited by the possibilities ahead. We will continue the loan program for irrigation system improvements. Partnerships that provide support for those with failing septic systems near the Clackamas River may bear fruit in 2015. And we will strive to meet the growing interest in small food production systems.

The District remains interested in having an office at a permanent location that includes learning space for workshops and community meetings. We will find a way to help conserve our working lands, so that future generations have places to farm and to grow trees, and so Clackamas County farms can continue to be significant food producers. We will continue to make progress on water quality and quantity issues, on enhancing wildlife habitat, and on managing invasive weeds.

On behalf of our entire team of board directors, employees, and partners, thank you for your support. We look forward to helping you with your conservation needs.

Tom Salzer, General Manager

Financing Projects that Make a Difference

This year our internal process for planning, designing, seeking approval, and implementing projects has become much more efficient. Staff and customers have reaped the benefit of our improved system to complete more conservation projects than in years past. Our loan program has grown legs and is carrying the weight of irrigation projects that have a hefty price tag. All of our loans to date have been repaid on time and many ahead of schedule!

Inefficient use of irrigation water has been on the radar screen of local producers. We have helped them reduce water use, energy use, and curb irrigation induced erosion.

Included in each project is an irrigation water management component that helps farmers more accurately track when irrigation is needed.

Beavercreek Demonstration Farm Update

Repairs and improvements to benefit the land, wildlife habitat, and existing structures were the goals for our first year at the farm. The board is actively planning the future of this

lovely property.

Liming, fertilizing, and giving the pastures a rest from hay production was the goal for 2014.

Wildlife habitat s a natural extension of the farm.

A rotten post on

the century-old barn was replaced.

Reaching Out and Partnering

Billboards, posters, advertisements, and calendars were some of the tools used to reach our customers.

what is hitchhiking on YOUR boots OLDING YOUR GROUN

Invasive species affect water quality, wildlife, and farm production. The District devotes significant effort to strategically controlling invasive weeds.

A ten-horse facility that routinely transported manure piles to the landfill, partnered with the district to build a manure composting facility. This project turned a water quality problem into a usable product and

reduced the operating cost for the facility.

Restoring upland wildlife habitat is a slow process. It involves invasive species removal, seeding conservation cover to reduce soil erosion, and planting native trees and shrubs.

Tansy Ragwor

We have many projects in progress to enhance and restore wildlife habitat, including oak savannah restoration.

Renting, Educating, and Restoring

(503) 210-6000

Renovation of the Equipment Rental Program was lauded by local farmers who counted on the no-till drill to improve their pastures.

Corral Creek neighbors of all ages gathered to celebrate the removal of the fish-blocking weir and learn about other conservation services available.

High-flow and low-flow fish passage problems were solved with the removal of

an old agricultural

The Boeckman School pollinator garden served as an educational opportunity and benefited native pollinators.

Congratulations to Jenne Reische who received the Outstanding

Shining Stars in 2013-2014

Claudia Chinook travelled up the freeway from Polk County SWCD to delight children and adults at the Milk Creek Watershed Celebration. She made quite a splash!

The 2013 recipients of District scholarships were Jessica Lindsay who continues her education at Portland State University and Jairo Romero who will attend Oregon State University.
